The EIS examines potential impacts of long term growth in neighborhoods surrounding light rail. Please join us at the two community meetings detailed to the left to learn about this analysis, the scenarios and topics it studied, possible improvements to roads and other infrastructure, how to comment, and next steps in the process.

These images were based on community input, presented at the October 2014 Design Workshops, and portray possibilities of how the subarea may change over time.

These maps show the two growth scenarios analyzed in the DEIS for the station subarea.
