I am sure you have access to this however, the citizens in the affected areas of 145th and 185th would like to know why the 155th single family homes are more important than theirs?

In addition, the reference to the peat bog on page 16 under the section labeled Geology and soils I would like to pose a question. Why is it Sound Transit is advised to do borings to determine whether construction is possible but the city without a study proposes zoning it MUR 70 plus plus

This I is yet another reason that the city council needs to wait for Sound Transit to publish their EIS.

Thank you,

Karen Easterly-Behrens
