7. Please direct staff to study the proposal to set a volume/capacity ratio limit on collector arterials as a way to encourage responsible development at locations where the street infrastructure is able to handle the traffic.

It is very important to maintain an adequate level of service on city streets as new development occurs and do everything possible to protect neighborhoods. Setting the v/c ratio limit would prevent large new development from being placed where the resulting additional traffic overloads a street that may be near its capacity. The While the City has this protection in place for principal and minor arterials, it does not for collector arterials, which encourages developers to place their developments further inside neighborhoods.

8. (o) Support

Thank you,
City of Shoreline
