

Table 1 - Shoreline 145th Corridor Study: Project Goals and Objectives

ID	PROJECT GOALS	OBJECTIVE STATEMENTS (Desired Direction)
1	Develop a preferred design concept that will improve the safety, mobility and accessibility for all users along and across the corridor.	Improve safety for all modes Multi-modal mobility improvements
2	Arrive at a preferred design concept that will emphasize the movement of people through all modes by enhancing the attractiveness of transit, walking and cycling along the corridor.	Improve transit performance and service Increase non-motorized connectivity
3	Develop a preferred design concept that optimizes efficient movement of people and goods.	Reduce congestion and delay Improve freight mobility
4	Arrive at a preferred design concept that can support both local and regional economic development objectives by stimulating interest in reinvestment or redevelopment of property along the corridor and near the 145th Street light rail station.	Support economic development
5	Arrive at a preferred design concept that supports City of Shoreline and City of Seattle plans and policies.	Increase coordination with capital projects and planned improvements Consistent w/ community development vision
6	When identifying the preferred design concept, consider the impacts to adjacent property and business owners resulting from right-of-way acquisition and the construction of improvements including access to property and impacts to existing buildings and improvements.	Minimize impacts to private property
7	Arrive at a preferred design concept that allows utilities to access, operate, maintain and upgrade facilities in a way that meets the system and/or service requirements for the street and the areas this corridor serves.	Upgrade stormwater management Improve ability to upgrade utilities
8	Arrive at a preferred design concept that provides environmental benefit and mitigation for impacts to critical areas.	Increase protection of critical areas Improve air quality Increase green infrastructure
9	Improve aesthetics in a manner that improves the comfort of the user and considers enhancements to views.	Improve aesthetics
OVERALL PROJECT PROCESS GOALS		Objective Statements (desired direction)
9	Involve adjacent residents, property and business owners, the public and affected jurisdictions in the decision making process to allow for consideration of all needs along the corridor.	
10	Arrive at a preferred design concept that allows different characteristics and features along the corridor and has the flexibility to incorporate site specific constraints, such as environmentally critical areas.	Context sensitive planning process Consistent w/ community development vision
