Will –

See response from Sara below. The primary reason for the increase is the replacement cost. The car is estimated to have a 10 year life.

You are correct the increase is due to the increased replacement cost. To provide a little more background- the increase in the annual replacement cost is actually \$1,050 but that is offset by \$700 saving in operating and maintenance costs when compared to the Ford Focus.

FYI – I assume it maybe the replacement cost is so much higher – but not sure. Can you let me know?

I am fine with the staff recommendation to replace the Ford Focus with a new Nissan Leaf. I am curious, however, why the annual operating, maintenance, and replacement costs for the Leaf are \$350 more than for the Focus. I would have thought that decreased fuel costs might result in lower overall operating costs for an electric vehicle.
