

2018 Surface Water Small Project

Near 1604 N 200th St (Work Order #11951)

Storm Drain Inlet Installation

Drainage improvements are coming to your street!

This project will make improvements to the stormwater system on the north side of N 200th Street, near the property at 1604. Drainage will improve and localized ponding will be minimized.

Project Improvements:

There is an existing low spot in the gutter near the property at 1604 N 200th Street that causes localized ponding when it rains. This project will install a new inlet and approximately 30 feet of new drain pipe along the shoulder on the north side of N 200th Street. The new drain pipe will connect to an existing storm drain structure at the northeast corner of the intersection of N 200th Street and Ashworth Avenue N. Upon completion, the site will be restored with new concrete and asphalt to match the existing condition.

The conceptual sketch below shows the proposed work on N 200th Street (looking west).

2018 Surface Water Small Project
Near 1604 N 200th St (Work Order #11951)
Storm Drain Inlet Installation

During Construction:

Peak construction activities should be limited to just a few days. The overall duration of construction activities may be spread out over a few weeks. Temporary construction impacts may include but are not limited to:

- Short-term unavailability of some on-street parking within or near the work area.
- Temporary traffic diversions on N 200th Street during active construction.
 - Local access will be maintained at all times; travel lane impacts will be limited to between 9am and 3pm on weekdays. The duration of such impacts is not expected to be more than a few days.
 - Bicycle traffic along N 200th Street within the work area may be re-routed.
- Temporary loss of driveway access (only for driveways within or near the work area). Residents will be notified in advance of any construction activity blocking a driveway. We will work with residents to minimize disruptions from driveway access issues.
- Disturbances to landscaping, signage, and paving within the right-of-way

Following Construction:

- You should notice improved drainage.
- General condition of construction site will be cleaned and restored to match pre-construction conditions, or better.
- Asphalt pavement and concrete curb and gutter will be neatly patched, as needed.
- Landscaped areas will be restored. Areas seeded for grass may not grow until later in the fall. Interim measures to prevent erosion and soil loss may be installed.

The City will respond to any questions, complaints, requests, or concerns as soon as possible.

Construction is scheduled for mid- to late-summer 2018; notice will be sent to confirm dates once known. Project website (listed below) will be updated as the project advances.

NOW is the time to ask questions or provide comments regarding this work.
