2018 Surface Water Small Project

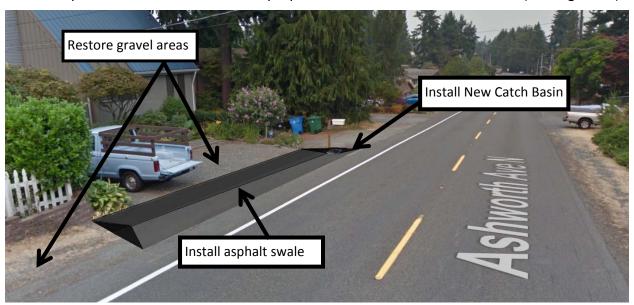

Drainage improvements are coming to your street!

This project will make improvements along the west shoulder of Ashworth Avenue N. An existing hazard to pedestrians and vehicles will be fixed.

Project Improvements:

Stormwater runs down the west shoulder of Ashworth Avenue N north of N 196th Street in an informal swale. Just south of the driveway to 19625, this flow path drops abruptly to enter a stormwater pipe, effectively making a hole at the pipe entrance. This 12-inch deep "hole" is a hazard to pedestrians and vehicles. This project will install a new 90-foot long, approximately 2-inch deep asphalt swale along the shoulder in front of 19625. The asphalt swale will collect stormwater runoff and direct it north to a new catch basin. The new catch basin will connect the swale flow to the existing pipe.

The conceptual sketch below shows the proposed work on Ashworth Avenue N (looking north).

2018 Surface Water Small Project

During Construction:

Peak construction activities should be limited to just a few days. The overall duration of construction activities may be spread out over a few weeks. Temporary construction impacts may include but are not limited to:

- Short-term unavailability of some on-street parking within or near the work area.
- Temporary loss of two-way travel on Ashworth Avenue N during active construction.
 - Local access will be maintained at all times; travel lane impacts will be limited to between 9am and 3pm on weekdays. The duration of such impacts is not expected to be more than a few days.
- Temporary loss of driveway access (only for driveways within or near the work area).
 Residents will be notified in advance of any construction activity blocking a driveway.
 We will work with residents to minimize disruptions from driveway access issues.
- Disturbances to landscaping, signage, and paving within the right-of-way

Following Construction:

- You will notice improved drainage and removal of the existing hazard.
- General condition of construction site will be clean and restored to match preconstruction conditions, or better.
- Asphalt pavement will be neatly patched, as needed.
- Gravel surfacing will be replaced where disturbed, as needed.
- Landscaped areas will be restored. Areas seeded for grass may not grow until later in the fall. Interim measures to prevent erosion and soil loss may be installed.

The City will respond to any questions, complaints, requests, or concerns as soon as possible.

Construction is scheduled for mid- to late-summer 2018; notice will be sent to confirm dates once known. Project website (listed below) will be updated as the project advances.

NOW is the time to ask questions or provide comments regarding this work. Please reference Work Order #11663.
