

# 2018 Surface Water Small Project

Near NW 194<sup>th</sup> Pl and 25<sup>th</sup> Ave NW (Work Order #6064)  
Drainage Ditch Replacement

## Drainage improvements are coming to your street!

This project will install a new pipe to replace an eroded drainage ditch. This work will improve safety and eliminate erosion risks and impacts.

### Project Improvements:

This project will install a new storm drain pipe on the northeast side of 25<sup>th</sup> Avenue NW, just northwest of NW 194<sup>th</sup> Place. The new pipe will follow the existing drainage ditch, which will be filled. The new pipe will connect to the existing catch basin the driveway for 2446 NW 194<sup>th</sup> Place. A new catch basin will be installed at the upstream end of the ditch. The shoulder area on top of the new pipe will be restored with grass seed to match the existing conditions.

The conceptual sketch below shows the proposed work on 25<sup>th</sup> Avenue NW (looking northwest).

Drainage Ditch Replacement

**During Construction:**

Peak construction activities should be limited to just a few days. The overall duration of construction activities may be spread out over a few weeks. Temporary construction impacts may include but are not limited to:

- Short-term unavailability of some on-street parking within or near the work area.
- Temporary loss of two-way travel on 25th Avenue NW during active construction.
  - Local access will be maintained at all times; travel lane impacts will be limited to between 7am and 6pm on weekdays. The duration of such impacts is not expected to be more than a few days.
- Temporary loss of driveway access (only for driveways within or near the work area). Residents will be notified in advance of any construction activity blocking a driveway. We will work with residents to minimize disruptions from driveway access issues.
- Disturbances to landscaping, signage, and paving within the right-of-way

**Following Construction:**

- Eroding ditch replaced with new pipe.
- General condition of construction site will be clean and restored to match pre-construction conditions, or better.
- Asphalt pavement will be neatly patched, as needed.
- Landscaped areas will be restored. Areas seeded for grass may not grow until later in the fall. Interim measures to prevent erosion and soil loss may be installed.

The City will respond to any questions, complaints, requests, or concerns as soon as possible.

**Construction is scheduled for mid- to late-summer 2018; notice will be sent to confirm dates once known. Project website (listed below) will be updated as the project advances.**

**NOW is the time to ask questions or provide comments regarding this work.**
