

ATTACHMENT C: NEIGHBORHOOD MEETING SUMMARY

Lynnwood Link Extension

City of Shoreline

Special Use Permit: Neighborhood Meeting Summary

June 27, 2018

1. Purpose of Meeting

On June 27, 2018, Sound Transit held a Neighborhood Meeting from 6:00pm to 8:00pm at the Shorewood High School in the City of Shoreline. The purpose of the meeting was to discuss and obtain feedback from City residents and property owners on Sound Transit's plans for the Lynnwood Link Extension project in Shoreline. The Neighborhood Meeting met the City of Shoreline code requirements for:

- The Special Use Permit (SUP) for the project, and
- Alteration of geologic hazard areas classified as Very High Risk Landslide Hazard Areas

The meeting provided a forum for Sound Transit to present the project, have the community review the project proposal, and provide Sound Transit with feedback to be considered before a special use permit application and critical areas alteration permit applications are submitted to the City of Shoreline.

2. Meeting Notice

Meeting notices (see SUP Attachment D) were sent to all property owners and residents within 500 feet of properties affected (temporarily or permanently) by the project. This included notices sent to owners or residents of: properties adjoining properties with affected very high risk landslide hazard areas; and properties within 200 feet of the project clearing limits where a hazard area, or standard 50-foot buffer from the hazard area, overlaid the properties.

The meeting notice was postmarked to recipient owners and residents on June 13, 2018. The mailing list included 3,281 total addressees, comprising: 2,798 Shoreline residents; 465 property owners located in other cities or states; representatives of the Ballinger, Echo Lake, Meridian Park, North City, Parkwood, and Ridgcrest Neighborhood Associations; and governmental representatives of the City of Shoreline and other agencies.

3. Attendance

According to the door count, there were a total of 275 attendees at the Neighborhood Meeting, which also served as a general open house for the Lynnwood Link Extension project. While not all attendees chose to formally record their presence at the meeting, 160 attendees did provide their names and

addresses on the meeting sign-in sheet (Attachment 1). Of those, 54 attendees signed up to receive project permit updates from the City of Shoreline.

Fifteen representatives from Sound Transit attended the neighborhood meeting, to provide information and answer questions about the Lynnwood Link project. There were also several tables of representatives from partner groups, including Sound Transit's Bus Rapid Transit project, Sound Transit/Seattle Department of Transportation bikes, City of Shoreline, Shoreline School District, Seattle Department of Transportation, King County Metro and Community Transit.

4. Information Presented

Sound Transit staff and consultants gave a presentation to introduce key Sound Transit staff, describe the status of the Lynnwood Link Extension project, and describe the design and function of key project elements in the City of Shoreline, including two proposed light rail stations and associated garages.

The presentation also described the project permits anticipated in the City of Shoreline and provided contact information for the City. Presenters further described the means of officially commenting in response to the meeting, and noted how public comments from the meeting would be used.

For more detail, see the presentation materials from the Neighborhood Meeting (Attachment 2).

5. Comments, Questions, and Responses

Public comments at the meeting were received and documented in two ways. Comment forms were available to capture written comments after residents reviewed the project materials and asked questions of staff. As recommended by city staff, attendees could also leave comments on notes at each information station. Nineteen comment forms were submitted (Attachment 3) and seventeen comments were left on Post It notes at information stations (Attachment 4). Below is a summary of verbal and written comments received, and Sound Transit's responses. When multiple comments expressed the same idea, those were combined and addressed in a single response.

- Three residents commented that the stations should have escalators. One commenter mentioned that eliminating down escalators does not comply with ADA requirements.

In designing stations for Link Light Rail, Sound Transit evaluates the needs of its users getting to and from the station platform in a safe and efficient manner. The 185th station has a relatively moderate rise over the platform of 20 feet, which is below the common heights of many stations throughout the U.S. that do not provide escalators. As a public agency seeking to balance providing a good user experience and responsibly spending public dollars, Sound Transit determined that an escalator was not necessary for the majority of users at this station. However, at the 185th station, 5 elevators are provided for riders who need assistance getting to their desired destination.

Sound Transit complies with all ADA requirements at all of its facilities. Elevators are provided at each station to accommodate for the needs of users who require assistance.

- One attendee encouraged Sound Transit to leave space at each platform end to accommodate potential future platform extensions.

Sound Transit designed the stations platforms to conform to industry standards which can accommodate a four-car train. Sound Transit is currently running 2-3 car trains in the system, but the Shoreline stations are being built to accommodate a 4-car train system, when the need to expand arises. As ridership continues to increase, Sound Transit can also respond to this demand by operating its trains at greater frequency.

- An attendee commented that the stations have insufficient restroom facilities.

The standard protocol for design of Sound Transit stations does not include restroom facilities. However, due to the high public demand for restrooms, Sound Transit added them at both 145th and 185th stations. These restrooms are designed to serve the average rate of customer usage at each station. Some wait time during busy times of the day was considered in determining the number of stalls at each restroom.

- One resident expressed interest in the wetland mitigation activity at Ronald Bog, and would like to be contacted or receive pertinent information if there are any roles for citizen involvement in that mitigation effort.

Within the mitigation site proper, which will be permanently fenced off to prevent public access, safety issues and contract terms will preclude opportunities for citizen involvement during either the construction/planting phase or the required monitoring period. All initial planting will be performed by a contractor who is responsible for those plantings for the first year plant establishment period. After the first year, Sound Transit begins a monitoring period which can last anywhere from 5 to 10 years. During the monitoring period, Sound Transit is responsible for ensuring that strict performance criteria are met at the mitigation site in accordance with local, state, and federal permits. Meeting these performance criteria requires adherence to protocols and procedures controlled by Sound Transit staff and its contractors. There could, however, potentially be opportunities for citizen involvement in other areas of Ronald Bog Park, outside of the fenced off mitigation site. If such opportunities are identified in the future by either Sound Transit or the City of Shoreline, they would be made public.

- One resident had concerns that the boarding platforms at the Shoreline North/185th Street station were redesigned to be narrower as part of a cost-saving initiative. They were concerned that this would limit the station's capacity to handle passenger crowds during peak commute hours (especially with some people bringing bicycles and large suitcases). They requested that Sound Transit prioritize station usability.

The sizes of the platforms at 185th station were not reduced. The configuration changed from a center-platform design to a side-platform design. The sizes of the platforms are designed to accommodate the current and future expected usage of the Light Rail Station, going both north and south.

- Three Shoreline residents asked Sound Transit to consider maintaining as many trees as possible to mitigate sightlines to construction, as well as environmental reasons.

Through the environmental review process, many mitigation actions were identified for the LLE project, and replacement of trees removed due the project is one of them. Sound Transit is complying with all regulations for tree replacement in the City of Shoreline and along the I-5 corridor in the WSDOT right of way. Sound Transit is also, for the first time, planting vegetation under its elevated guideway.

Sound Transit is in compliance with City of Shoreline code and is planting vegetation buffers around and the garage and incorporating a mix of landscaping throughout the station sites. A balance between vegetation and safety must also be factored into the design of the landscaping, to minimize the potential for hiding behind densely vegetated areas.

- Seven residents commented about the colors presented as part of the design. Some residents liked the color schemes presented, while others did not.

Color choice is very important to Sound Transit, as a way to help users navigate the station and get to their desired destination, as well as adding visual interest to the buildings. The colors were chosen to support an artistic theme of native vegetation, cedar and fir trees, and the surrounding native habitats of wetlands and the Puget Sound. Sound Transit worked to find a balance of colors that fit with an overall theme for the City and western Washington.

- Two attendees requested increased bus service to the light rail stations.

That is a great question to ask of our bus transit partners, King County Metro and Community Transit. Their staff were present at the Shoreline open house to answer questions. Additionally, their contact information is as follows, King County Metro:

<https://kingcounty.gov/depts/transportation/metro/travel-options/bus.aspx>; 206-553-3000.

Community Transit: <https://www.communitytransit.org/>; 425-353-7433.

- One attendee liked the new design of the garage at 145th St Station better than the last façade.

The design of the garage at 145th is continuing to evolve. Some people have expressed support for the old design and some have expressed interest in the new design. Sound Transit is working

to balance our use of public dollars with the application of a design theme throughout the station and between the stations, consistent with the vegetated characteristics of the Shoreline community and compatible with neighborhood character.

- One resident asked if there will be adequate room to stand on the platform under cover, and noted other stations are very uncomfortable if it's raining or windy.

The station canopies are designed to cover the majority of the platform length and provide shelter from the weather for those waiting for the train to arrive. The platforms are not fully enclosed.

- One attendee asked that Sound Transit consider pedestrians traveling to the stations.

Sound Transit is making a variety of improvements to the surrounding transportation infrastructure to help improve access to the stations via car, bus, walking, and bike. Sound Transit must balance its expenditure of public dollars and unfortunately cannot commit to providing sidewalks on many arterials. Sound Transit recommends talking with your city representative to express these thoughts and discover the city's plans for improved access:

<http://www.shorelinewa.gov/>; 206-801-2700.

- Six residents had concerns about additional traffic on City streets, or inefficiencies at drop off areas.

To build this project, Sound Transit analyzed the impacts to the community through the environmental review process. The Project is designed to comply with all traffic flow requirements and had to ensure the City, its project would not diminish the level of service designated for each street. Where level of service was found to be diminished, street improvements were designed, to accommodate the increased traffic volume and return the street to the required level of service.

- Four attendees asked Sound Transit to consider eliminating or reducing parking garages.

There are two types of stations built by Sound Transit, urban and suburban. Urban stations are located in densely populated areas and do not include parking. Suburban stations are located in suburban areas and include parking. Shoreline, being a suburban area, has stations with parking garages, and it is designed this way to ensure the stations are appropriately used by a large percentage of the community. Sound Transit designed its stations to also encourage other modes of transportation, such as bus, bike, and walking.

- One attendee expressed concern about insufficient parking.

Two 500-stall garages are being built in the City of Shoreline resulting in a net increase of approximately 430 parking stalls. The stations are also designed to accommodate and encourage other modes of transportation such as bus, bike, and walking.

- One attendee requested a rezone to increase ridership.

The City of Shoreline has rezoned part of the City to accommodate higher growth, around the stations. More information can be found on the city's website or by contacting city staff: <http://www.shorelinewa.gov/>; 206-801-2700

- One attendee requested that Sound Transit consider providing public access to space around a project drainage facility.

The site in question (near NE 155th and Interstate 5) is planned to be a stormwater detention facility, constructed, owned, and maintained by the Sound Transit. The purpose of this site is to properly manage stormwater runoff, consistent with state and local regulations. Due to safety concerns and operational and maintenance requirements, public access cannot be allowed on this site. Residents interested in learning more about public access to green spaces may contact a local city representative: <http://www.shorelinewa.gov/>; 206-801-2700.

- Four residents expressed the desire to add a stop light or roundabout at 8th Ave NE in the vicinity of 188th and 185th to reduce potential traffic impacts. One resident requested Sound Transit add a traffic light instead of a traffic circle at the 185th Station.

To build this project, Sound Transit analyzed the impacts to the community through the environmental review process and designed the project to comply with all local traffic flow requirements and had to assure the city its project would not diminish the level of service designated for each street. Where level of service was found to be diminished, street improvements were designed, to accommodate the increased traffic volume and return the street to the required level of service. It was determined that traffic improvements were needed at 185th and 8th and Sound Transit, in consultation with the City traffic engineer determined a round-about design would better address traffic impacts. It was determined that no improvements at 188th were needed due to impacts from this project.

6. Summary of Proposed Modifications/Concerns that Sound Transit is Addressing

Based on input received from the meeting and in compliance with the City's Guiding Principles and Code, Sound Transit has added additional art work and visual interest to the garages to be

compatible with neighborhood character while balancing the visual preference between those who prefer the garage screening versus those who do not. Sound Transit will ensure the vegetation surrounding the stations, garages, and rail alignment to include tall, dense trees, while balancing the safety needs of the public.

7. Summary of Proposed Modifications/Concerns that Sound Transit is Unable to Address

Sound Transit is not proposing to provide additional escalators to its stations. The heights riders must travel to get to their desired destination is moderate for transportation hubs and the current design provides efficient mobility for the majority of users. For those who need additional assistance to get to their desired destination, elevators are provided. The elevators are also designed to maximize public safety by being transparent, both in and out.

Additional bathrooms will not be provided; the station bathrooms are designed to accommodate the average number of users expected throughout the day, which includes some wait-time during busy times of the day.

Sound Transit is not proposing to change the colors to its stations. Some comments express support for the chosen colors while some express discontent.

Sound Transit is not proposing to add additional street improvements beyond what was identified in environmental review documents and the design drawings.

Attachment 2: Neighborhood Meeting Presentation Slides

***Lynnwood Link Extension
Shoreline & Seattle Open House***

Presentation Overview

- Introductions
- Project description and schedule
- Construction preview
- Station design & updates
- Permits
- Open house guide

Current Service and Approved Projects

Near term Link extensions:

- University of Washington – Northgate (2021)
- Northgate – Lynnwood (2024)
- Downtown Seattle – Overlake (2023)
- Angle Lake – Federal Way (2024)
- Tacoma Theater District – S 19th

Additional extensions shown were passed in Sound Transit 3.

Lynnwood Link Extension

- 8.5 mile extension - Northgate to Lynnwood City Center
- 4 stations:
 - Shoreline South/145th – elevated
 - Shoreline North/185th – at grade
 - Mountlake Terrace – elevated
 - Lynnwood City Center – elevated

Project Schedule

Construction Preview

Summer 2018:

- Selective demolition
- Fieldwork

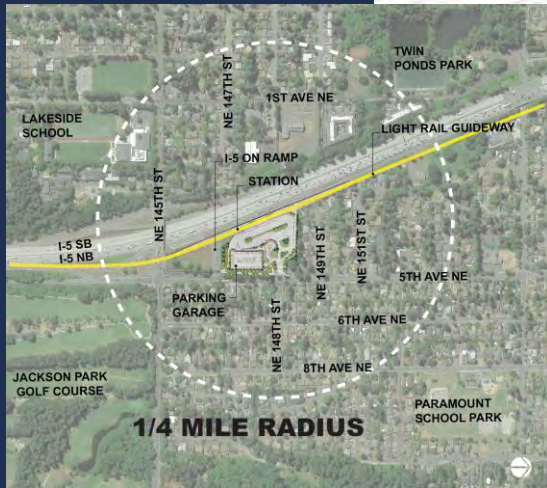

Construction anticipated in early 2019

- Early 2019
 - Utility relocations
 - Clearing and grading
- Mid-2019:
 - Active construction begins

Service begins 2024

Also tonight: Part of City of Shoreline Special Use Permit application

Intent of Permit:

- Tonight's meeting satisfies requirement for application to City of Shoreline
- Permit will place conditions on project to ensure compatibility with adjacent land uses
- SUP addresses critical areas and administrative code modifications required for the project

Process:

- Formal application submittal August 2018
- 21-day Public Comment Period starts with City's Notice of Application
- Final decision is made by the City's Hearing Examiner

Critical areas

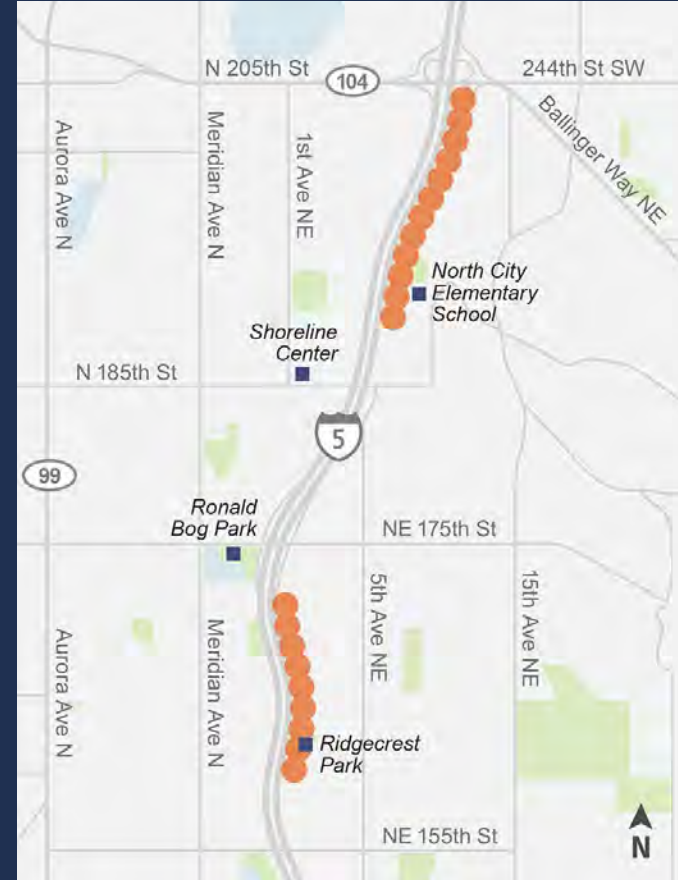

Wetlands, Streams, and Buffers

- Most wetlands between NE 151st St to NE 155th St
- Filling 0.35 ac of wetlands and 0.68 ac of buffers
 - Mitigating at Ronald Bog Park
- Vegetation impacts to McAleer Creek buffer to be restored on-site in I-5/SR 104 Interchange loop

Critical areas (continued)

Landslide Hazard Areas

- Very high-risk landslide areas as defined by City
 - North and south of Ridgcrest Park – NE 159th to NE 172nd
 - North of North City Elementary – NE 189th to NE 205th St
- Removing vegetation and excavating cut/fill slopes
- Design strategies include tiebacks and retaining walls

List of other anticipated permits

- Critical Area Special Use Permits for Ronald Bog Mitigation Site and McAleer Creek
- Building Permits
- Demolition Permits
- Site Development Permits
- Right-of-Way Use Permits
- Floodplain Development Permits

Comments and information

- Comment sheets and sticky notes
- Comments and Sound Transit's responses documented in a Neighborhood Meeting Summary
- Sign up to receive more information on the SUP

The 185th street station must have escalators. I understand they were removed for cost-cutting, with premise being the grade-change is not quite as much as other stations, but forcing all users to take stairs UP from platform, even only 20 feet, is unrealistic. Elevators alone are not viable. Design platforms to have at least UP-only escalators. This will discourage so many people from using this station. Escalators are critical for viability.
thank you.

I would like to encourage sound transit to ~~provide~~ leaving space at the ends of stations to accommodate potential future platform extensions. We have no idea what the future transit demand markets will look like. For example ULink hit us with an unexpectedly high ridership. What if it just so happens that when all the TOD in SnoCo/N King county gets built out, were unable to accommodate ridership? Perhaps it shall be necessary to do as the original Sound Move plan called for and run trains down 1-5, and if that happens, we'll need to have longer trains. Plus leaving these spaces is essentially free, since it doesn't need any new building. Just leaving 50-100' of space on each side for extensions will be sufficient. This will also allow ST to build out high quality ~~commuter~~ commuter rail to everett/sno, like the voters want

The 145th & 185th Stations plans have insufficient Restroom facilities, as evidenced by the current lack at the Northgate Transit Center.

Eliminating down escalators doesn't comply with ADA requirements.

Thank you for the detailed presentation. We understood that as a cost saving measure it was decided to eliminate the down escalators at the 145th station. This is a concern because 3 flights of stairs are difficult if someone has any mobility issues / issues with sore / arthritic knees / balance issues. Elevators don't really solve the problem + at night pose security issues. We would appreciate consideration for adding at least 1 down escalator in addition to the up escalators.

Thank you for your consideration —

It is my understanding that the boarding platforms at the Shoreline North / 185th St Link station were redesigned to be narrower as part of a package of design changes intended to address project cost overruns. I am concerned that this will limit the station's capacity to handle passenger crowds during peak commute hours (especially with some people bringing bicycles and large suitcases).

Please prioritize station usability as these design decisions are permanent once built and we have just one chance to get it right.

Thank you for your consideration and I look forward to riding the Lynnwood Link Extension when it opens in 2024.

As a longtime Shoreline resident (15 years) I have loved many things about the city and look forward to light rail making my commute to Seattle easier. Please consider the neighbors in the vicinity of acquired properties and make every effort to retain as many trees as possible (as a mitigation from seeing construction as well as environmentally a buffer for noise, dust, etc). We have a young child at home and I would very much appreciate a safe and tall buffer between our street and the construction zone. (≈ 174th & 2nd).
 Thank you!
 Anna

My comment is regarding the new 185th station design. I do like that the garage was moved to the east side of I-5 to be co-located with the station. However, the new parking garage design is so large and creates a huge open concrete area. I'm wondering if there could be more greenery or potential commercial space located on top of the garage. It is such a large area and by comparison to the surroundings seems out of place. The new zoning will allow up to 6 story structures I believe, maybe it doesn't need to be so low?

I love the finishes for the 185th station. Very contemporary + nice.

A little hard to tell from the pictures... is there adequate room to stand on the platform under cover?

The airport station is awful when it is rainy +/or rainy + windy.

Please consider the following:

We have NO sidewalks going East & West on most streets from 105th to 145th. I would hope that you would be considering the "walkers" who hopefully would walk to the transit stations.

Visit our neighborhood & check out 5th Ave NE between 105th & 185th. This is now a 2 lane road with bike lanes and how much traffic will you be adding to this "side street?"

Concerning your "drop off lane" it's a great idea but you should visit a grade school and see how inefficient it is at peak time.

To cut cost, Remove the parking garage at 145th. The garage will overrun in no time each day and cause additional traffic. People will park in the neighborhood. Since this is supposed to be a hub station, increase bus traffic to neighborhood park and ride lots instead. Disperse the parking and encourage transit instead. The parking lot will be an "epic fail" and cause a lot of grief besides. Also, it's atrocious to those having to look at and listen to it. 5th Ave NE can't accommodate all the traffic either, so let's discourage driving to the station. It just creates a major traffic bubble in one small area.

The N. 185th bus area is all concrete, need planters/trees.

The 500 car parking is too many.

Any plans for circulators to encourage carless access to station?

Please Please consider traffic lights instead of a traffic circle.

The Buses should have a light to turn in and out of station

Cars will get on and off of 5th OK, but traffic on 5th will be a mess for both the cars and the BUSES

Project looks really good. I like the changes made - the garage on the east side of 1-5 makes a lot more sense as a transit user. Glad the garage has been moved.

Thank you for presentation. Very informative and I look forward to the train service coming to Shoreline.

Post-It Note Comments from June 27, 2018 Shoreline Open House

Type:	Location:	Transcribed Comment:
Post it	Shoreline South 145 th Station	<ol style="list-style-type: none"> 1. Cut cost by eliminating parking garage + have regional P+R instead 2. Concerned about neighborhood cut through traffic going to NE 148th to get direct access into station 3. Rezone! We're building this multi-billion dollar station with tax dollars. Why are we cutting our own ridership? 4. If ridership estimates are accurate, where will they all park? No parking on 155th & 5th. Don't say bus rapid ride. Zone permit.
Post it	NE 155 th street	<ol style="list-style-type: none"> 1. Strongly suggest this greenspace be given public access. Please email wvfranklin@yahoo.com
Post it	Shoreline South 145 th station (closer to 5 th ave NE)	<ol style="list-style-type: none"> 1. No support for garages. They bring in many cars which reduces livability. Have TOD instead to increase ridership.
Post it	185 th and 8 th	<ol style="list-style-type: none"> 1. Stop light please, or roundabout. Stop light at 185th and 8th.
Post it	Shoreline North & 185 th station	<ol style="list-style-type: none"> 1. 188th will be a main access for anyone coming from LFP and 15th ave "short cut".

		<p>188th needs a stop light improvements.</p> <ol style="list-style-type: none"> 2. 188th street will be a main way people from 15th ave will reach the station. 3. The street improvement are not enough for the potential traffic on 188th st near 8th ave. 4. Stop light at 8th and 188th. 5. Stop light please or roundabout!
Post it	Material Board	<ol style="list-style-type: none"> 1. Orange is garish! Find a bright complementary color to keep theme of nature's understory! 2. The accent color for 145th station stands out without screaming at you. The neon orange color for 185th is TERRIBLE! It does not fit with our area! Please change it to something that adds color without being so in your face. 3. Agreed! Orange, yuk! 4. Orange really pops! It's great. Live a lil! 5. A nice cheerful color. Good for grey days. I like it.
