

## Construction is Coming!

### Project Improvements: 2021 Stormwater Pipe Repair and Small Drainage Projects

The 2021 Stormwater Pipe Repair and Small Drainage Projects is a combined project that is part of the City's ongoing multi-year Stormwater Pipe Repair and Replacement Program (SWPRRP) and Surface Water Small Drainage Projects Program (SWS DPP). These programs proactively ensure public safety, reduces flooding, decreases maintenance demands, protect critical infrastructure and other public and private property.

This summer's project will be constructing to fix small drainage issues at multiple locations throughout the City. Construction activities may include any or all of the following, as needed to complete repairs: Pavement removal, excavation, pipe and catch basin installation, pavement repair and temporary traffic control.

### Construction will occur at the following locations:

Near 15433 Linden Avenue N.

Near 20115 20<sup>TH</sup> Avenue NW.

### During Construction:

Peak construction activities should be limited to just a few days. The overall duration of construction activities may be spread out over a few weeks. Temporary construction impacts may include but are not limited to:

- Short-term unavailability of some on-street parking within or near the work area.
- Temporary loss of two-way travel during active construction.
  - Local access will be maintained at all times; travel lane impacts will be limited to between 7am and 6pm on weekdays. The duration of such impacts is not expected to be more than a few days.
- Temporary loss of driveway access (only for driveways within or near the work area). Residents will be notified in advance of any construction activity blocking a driveway. We will work with residents to minimize interruption of driveway access.
- Disturbances to landscaping, signage, and paving within the street right-of-way

### Following Construction:

- You should notice improved drainage.

- General condition of construction site will be clean and restored to match pre-construction conditions, or better.
- Asphalt pavement and concrete curb and sidewalk will be neatly patched, as needed.
- Landscaped areas will be restored. Areas seeded for grass may not grow until later in the fall. Interim measures to prevent erosion and soil loss may be installed.

**Construction is scheduled for early summer to late fall of 2021; notice will be sent to confirm dates once known.**
