

2022 Stormwater Pipe Repair & Small Drainage Projects Near 810 NW 200th Street Open-Cut Pipe Repair

Drainage improvements are coming to your street!

Project Improvements:

This project will repair or replace short segments of damaged stormwater pipe at 18 locations throughout the City. Construction activities may include any or all of the following, as needed to complete repairs: pavement removal, excavation, pipe repair or replacement, pavement repair and temporary traffic control. In some cases, a new catch basin may be installed to help facilitate better surface water drainage.

The conceptual sketches below show the proposed work near 810 NW 200th Street.

There may be other work sites near your address. See the project website below for a complete listing of work site locations.

During Construction:

Peak construction activities should be limited to just a few days. The overall duration of construction activities may be spread out over a few weeks. Temporary construction impacts may include but are not limited to:

- Short-term unavailability of some on-street parking within or near the work area.
- Temporary loss of two-way travel during active construction.
 - Local access will be maintained at all times; travel lane impacts will be limited to between 7am and 6pm on weekdays. The duration of such impacts is not expected to be more than a few days.
- Temporary loss of driveway access (only for driveways within or near the work area). Residents will be notified in advance of any construction activity blocking a driveway. We will work with residents to minimize interruption of driveway access.
- Disturbances to landscaping, signage, and paving within the street right-of-way.

Following Construction:

- You should notice improved drainage.
- General condition of construction site will be clean and restored to match pre-construction conditions, or better.
- Asphalt pavement and concrete curb and sidewalk will be neatly patched, as needed.
- Landscaped areas will be restored. Areas seeded for grass may not grow until later in the fall. Interim measures to prevent erosion and soil loss may be installed.

The City will respond to any questions, complaints, requests, or concerns as soon as possible.

Construction is scheduled for early summer to late fall of 2022; notice will be sent to confirm dates once known. Project website (listed below) will be updated as the project advances.

NOW is the time to ask questions or provide comments regarding this work.

Please reference the work location listed at the top of page.
